Delivering Google Workspace as a game-changing enterprise solution

Robi recently delivered Google Workspace Business Starter and Enterprise Starter solutions to GPH Ispat, one of the leading integrated steel manufacturing companies in Bangladesh. This made GPH Ispat the largest enterprise-level adopter of the state-of-the-art digital enterprise solution in the country.

Robi's ICT-focused subsidiary, RedDot Digital Limited, ensured smooth migration from GPH's legacy system to the Google Workspace enterprise solution. Built on Google Cloud, Google Workspace brings together the productivity and collaboration applications people know and love - like Gmail, Docs, Sheets, Slides, Meet, Chat, and more - into a single, integrated workspace, with built-in enterprise-grade access management, device management, data protection, and data encryption to establish a secure hybrid working environment.

Commenting on the successful adoption of Google Workspace, GPH's Chief People Officer, Sharmin Sultan said: "GPH was experiencing difficulties with our legacy solutions. When Robi came along with Google Workspace and showed us their rich bouquet of enterprise solutions at an affordable rate, we knew we had found the best solution to our problem. I thank the Robi and Google Workspace team for their wholehearted support in giving us a digital facelift."

Robi's Chief Enterprise Business Officer, Md. Adil Hossain Noble said: "We thank the GPH management for trusting us to implement their Google Workspace enterprise solution. Together with the technical expertise of Robi's ICT-focused subsidiary, RedDot Digital, we are now ready to deliver new experiences for the country's enterprise business sector under our Robi for Business brand."
